GROUPTALK HOW IT WORKS

With a simple push of a button personnel have access to real time group communication, like two-way radios.

Press the panic button to instantly alert colleagues of a dangerous situation with live location updates.

Efficiently coordinate your work force with the PC dispatcher.

✔ Prior investments in traditional radio networks can be leveraged by bridging into the GroupTalk cloud, extending the radio communication to include smartphone users.

Your existing Android or iOS based phones can be used, with optional push-to-talk accessories such as Bluetooth speaker microphones or push-to-talk buttons.

✔ No on-the-premise installations or maintenance as GroupTalk lives in the cloud, using mobile and WiFi networks for a truly global coverage.

✔ Stay in control of the communication flow: manage users, groups, licenses and more with the web based interface. The users install the GroupTalk app and are ready to go within minutes!

FEATURES

- Instant push-to-talk group communication in any number of PTT groups
- Use scanning to monitor additional PTT groups
- Use private calls for ad hoc communication between two users
- Panic alarm can immediately notify other users and dispatchers and start live location reporting
- Queue functionality lets users request the attention of dispatchers without disrupting their workflow
- Location can be used to see your colleagues in real time on a map
- The PC Dispatcher coordinates your work flow

ACCESSORIES & HANDSETS

For most professionals PTT specific accessories are recommended to communicate without having to handle the phone physically.

✔ Bluetooth based Remote Speaker Microphones (RSMs) with PTT and alarm buttons.

✔ Bluetooth 4.0 based PTT buttons to be combined with headsets of your choice. Note that these can also be used as alarm button.

✔ Professional headsets with media button for phone handling. To be combined with PTT button.

We encourage customers to use their existing smartphones, but for some users a ruggedized phone with physical PTT and/or alarm button can be a better choice. In our opinion the Android phones from RugGear provides great value.

Feature phone with PTT and alarm buttons

Rugged smartphone with PTT button

Rugged tablet for use in extreme conditions

WHY CHOOSE grouptalk

EASY

Administrate your network centrally, user apps available from your app store

RELIABLE

Carrier independent, multi channel 2-way radio and personal alarm over mobile- or WiFi networks

SECURE

SSL AES 256 encryptions for your privacy and personal alarm for the users
